

## Clinical Criteria For

## Substance Use Disorders (SUD) Medications

(Starting January 1, 2015)

**Please note that the FDA labeling recommends that treatment with these drugs should be part of a comprehensive management program including psychosocial support.**

\*Medication assisted treatment (MAT) is the use of FDA-approved medications in combination with evidence-based behavioral therapies to provide a whole-patient approach to treating substance use disorders (SUDs). There is strong evidence that use of MAT in managing SUDs provides substantial cost savings. Please see this link for additional information:
